

currentWord

“I have discussed the probable origin of domestic pigeons at some, yet quite insufficient, length;...”

wordAtIteratorHead

```
currentContext = (origin`, ` `, `of`, ` `, `domestic`, ` `, `pigeons`, ` `, `at`, ` `, `some`, `,`, `,`, ` `, `yet`)
```

```
queryWord = `pigeons` , contextWordCount = 3
```

If `queryWord` matches `currentWord`, return the string with context:

```
result = ["origin of domestic pigeons at some, yet quite"]
```
